

# STN ISO 690:2022 (01 0197) Information and documentation. Guidelines for bibliographic references and citations to information resources

## Most important changes

---

► If the cited information resource has **5 creators**, all names are listed. Otherwise only the names of the first five creators are given, followed by „**and others**” or „**et al.**” or are listed all authors.

► The new version of the standard introduces a change in online documents (mostly in the journal articles). If the link goes directly to the article, **the article title is italicized**. In the printed version the journal title is italicized.

► **The edition** is mandatory if available and is placed before the publisher data.
