

Conditions for granting credits from the subject „BIOLOGY AND HUMAN GENETICS 1“ for students of General medicine

Lectures: A comprehensive study involving both in-person lectures and corresponding textbook chapters. Lectures are highly recommended as they often provide the most current information, which may not be available in assigned readings. Furthermore, the practical exercises directly follow the material covered in lectures.

Practical exercises:

a) **thorough preparation for the topics of practical exercises** (schedule is published on the department's website by use of required and recommended study materials) and the presentations which will be provided in advance (via MS Teams);

b) **100% active participation in practical exercises and seminars is required**, with the possibility of one excused absence (a medical certificate is required). Exceptionally, in case of a planned absence, a make-up session may be arranged during the current teaching week, subject to the lecturer's approval and considering the capacity of the teaching rooms;

c) **preparation of a seminar paper or poster presentation** according to the assignment;

d) **a successful result on credit tests is required**. Grading will be based on the following scale – A: 100–97%, B: 96–93%, C: 92–89%, D: 88–85%, E: 84–80%, Fx: 79% and less. If a retake test (or tests) is required, the final grade will be the average of the points obtained from the regular and retake test(s).
